I so enjoy the braodcast choices and consumer advancement of XM radio. The selection, the service, the ability to listen to your favorite station...wherever you are. It would be a shame to legislate that away. Be it traffic and weather or the next onslought of litigation form "big radio", you can not stop technological progress, and XM radio is progression at radio's highest level to date. Please let the consumer decide and reject NAB's petition 04-160.  
Most sincerely,

Bill Diehl
